Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Trends Endocrinol. Metab. 12:118-122(2001).
-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type 1 (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Event—Alternative splicing; Named isoforms=2;
Name=1; Synonyms=Ghrelin;
Isoid=090YH7-1; Sequence=Displayed;
Name=2; Synonyms=del-Gln14-ghrelin;
Isoid=090YH7-2; Sequence=VSP_003248;
TISSUE SPECIFICITY: Broadly expressed with higher expression in the stomach. Very low levels are detected in the hypothalamus, heart, lung, pancreas, intestine and adipose tissue.

PTW: O-n-octanoylation is essential for activity. The replacement of Ser-26 by aromatic tryptophan preserves ghrelin activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hosoda H., Kojima M., Matsuo H., Kangawa K.; "Ghrelin and des-acyl ghrelin: two major forms of rat ghrelin peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      οĮ

                                                                                                                                                                                                                                                                                                                                                               + (DNA)(N)
-1- SUBUNIT: DNA polymerase III contains a core (composed of alpha, epsilon and theta chains) that associates with a tau subunit. This core dimerizes to form the POLIII' complex. PolIII' associates with the gamma complex (composed of gamma, delta, delta', psi and chi chains) and with the beta chain to form the complete DNA polymerase III complex (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pfam: PF00929; Exonuclease; 1.

This core dimerizes to form the POLIII complex. PolIII' sasociates with the gamma complex (composed of gamma, delta, delta', psi and chi chains) and with the beta chain to form the complete DNA polymerase III complex (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: DNA POLYMERASE III IS A COMPLEX, MULTICHAIN ENZYME RESPONSIBLE FOR MOST OF THE REPLICATIVE SYNTHESIS IN BACTERIA. THE EPSILON SUBUNIT CONTAIN THE EDITING FUNCTION AND IS A PROOFREADING 3-5' EXONUCLEASE (BY SIMILARITY).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           -i- PATHWAY: De novo purine biosynthesis; first step.
-i- SIMILARITY: IN THE C-TERMINAL SECTION: BELONGS TO THE PURINE/PYRIMIDINE PHOSPHORIBOSYLTRANSFERASE FAMILY.
-i- SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Amidophosphoribosyltransferase precursor (EC 2.4.2.14) (Glutamine phosphoribosylpyrophosphate amidotransferase) (ATASE) (GPATase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                      September 11, 2003, 17:21:03; Search time 122.005 Seconds

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a protein designated Zsig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or allelic variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal cell contractility, secretion of digestive enzymes/acids, gastrointestinal inflammation, reflux disease and nutrient carymes, gastrointestinal inflammation, reflux disease and nutrient of absorption regulation. Zsig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the chomologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety or treat obesity and other metabolic disorders where neurological feedback modulates nutritional absorption. They are useful to identify zsig33 agonists, antagonists and ligands and to produce antibodies.

human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anti-inflammatory, antimicrobial, noctropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagoniats of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Antagoniats of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Antagoniats of including cancer), inflammation, cardiovascular, neurological, creproductive or developmental disorders, (e.g. arterioscierosis, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, asthma, Crohn's disease, microbial or other infections, congestive or ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's classes, schizophrenia, ovulatory defects, muscular dystrophy). HSPP nucleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnosis and monitoring), in gene therapy, as antisense, triplex-forming or ribozyme therapeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise specific antibodies (Ab) and to screen for agonists and antagonists (potential therapeutic agents). Ab are used to diagnose, or monitor, HSPP-related diseases (in usual immunoassays), as therapeutic antagonists, in competitive drug screens, and for purification of HSPP from natural sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHQRVQQRKESKKPPAKLQPRALAGWLRPE 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                           The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system activity and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression. Activin/inhibin activity, chemoctactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening.

The invention relates to a method of forming a reversible peptide-
creceptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsig33 peptide (Comprising residues 24.37
of AAB62649), where the receptor hinds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
cransduction in a cell expressing a receptor. It is also useful for
modulating secretion of hormones, neural development and/or utilization,
gastric contractility, nutrient uptake, secretion of digestive and
parcreatic enzymes and hormones, secretion of insulin like growth factor
c. secretion of non-zsig33 proteins. It is useful for modulating growth
commone secretion in a mammal having a disease associated with abnormal
evels of growth hormone, such as osteoporosis, bone repair, bone
remodeling, low osteoblast levels, cartilage repair and remodeling,
skeletal dysplasia, immune suppression, obesity, growth retardation,
crediction, wound healing and ovulation induction, treating a mammal having
a metabolic disorder requiring neurological feedback, such as satiety
regulation, glucose absorption and metabolism and neuropathy-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      release in a mammal. The present sequence represents the human zsig33 polypeptide, a peptide ligand for the G-protein coupled receptor, GHS-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHQRVQQRKESKKPPAKLQPRALAGWLRPE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see Secretagoque receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jedjunum tissue, stimulating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying.
                                                                                                                       SGIP; zsig33; anorectic; antidiabetic; somatotropin; somatomedin-C; nutritional absorption modulator; growth hormone secretagogue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel variants of SGIP peptides for modulating contractility in duodenum or jejunum tissue, pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion or modulating quastric emptying .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion collar. The peptides are ghrelin homologues and are concacturised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth commone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents human zsig33. The specification describes a short gastrointestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to motilin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by expressing inactive proteins or to supplement the patients own production of SGIP. SGIP may also be used as an antique in the production of antibodies against SGIP and in assays to identify modulators of SGIP antibodies may also be used to regulate expression and activity. The anti-SGIP antibodies, agonists and activity of the presence of SGIP in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The invention relates to zsig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones.

The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZsiG33 expression.

The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZsiG33 peptides are used as antiques in need of restorative therapy. The ZsiG33 and in assays to identify modulators of ZsiG33 expression and activity. The anti-ZsiG33 antibodies and also used as diagnostic agents for detecting the presence of ZsiG33 in samples (e.g. by enzyme linked immunosorbent assay (ELISA). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide is used in protein therapy. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MPSPGTVCSLLLLGMLWLDLAMAGSSFLSPEHQRVQQRKESKKPPAKLQPRALAGWLRPE 60

                                                                                                                                                      g
                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                        The invention relates to zsigl3-like peptides (zS33LP) including 2sigl33-linker, zsigl33-beta, zsigl3-gamma, zsigl33-delta and zsigl33-linker, zsigl33-beta, zsigl33-gamma, zsigl33-delta and csigl33-linker, zsigl33-beta, zsigl33-gamma, zsigl33-delta and czsigl33-like peptides. ZS33LP peptides actimizedels encoding such czsigl33-like peptides. ZS33LP peptides actimized the immune system in boosting immunity to infectious diseases, treating immunocompromised in patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and improving vaccines of the invention are used to identify and improving of ingrowth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate consultation of tumour cells, as additives to anti-chypoglycaemic preparations containing glucose and as adsorption containing glucose and as adsorption containing glucose and as adsorption containing cluckers for oral drugs which require fast nutrient action and to standard contractions of tissues associated with gastrointestinal system, brain and central nervous system. These contections are useful for treating discontest are useful for treating discontest as and/or and contractility in vivo and to treat contractines are useful for treating discontest as associated with mastrointestinal and growth related diseases. ZS33LP peptides, nucleic with mastrointestinal contractility in sorreition of the careful or with any or the contractility in the discontine and contractility and disc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   with gastrointestinal contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones in the pancreas and/or brain, gastrointestinal motility, recruitment of digestive enzymes, inflammation and regulation of nutrient absorption. Sequences of the invention are useful in gene therapy. The present sequence is human zsig33 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises asign3-like peptides -

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides for linking bloactive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists. Cor modulating blological activities of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for for stimulating the release of tumour necrosis factor (TNF)-alpha from human blood, for stimulating the presence of tumours. The polynucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation of antisense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ABU66570-ABU66844 represent the human polypeptides of the invention.

Or pro polypeptides of the invention.

Claim 12; Fig 442; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleaties sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid acid further comprises the full-length coding sequence of the DNA deposited under American Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host calls for producing PRO proteins, PRO fusion proteins, anti-PRO attracellular domains and mature sequences, methods of detecting PRO proteins, PRO included are vectors and host calls for producing PRO proteins, and mature sequences, methods of detecting properties factor alpha from human blood.

Thr-alpha (tumour necrosis factor alpha) from human blood, and the proliferation of differentiation of chondrocyte cells, the release of proliferation of, or gene expression in pericyte cells, the release or proteing cells, the proliferation of T-lymphocyte cells, the release of proliferation of endothelial cells), a method for modulating the uptake of glucose or free fatty acid (FRP) by skeletal muscle cells, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of a method for detecting the properties are useful for treating inflammatory diseases, organ polypeptides are useful for treating inflammatory diseases, organ and a company of the nucleotide sequences cited above. The nucleic organical control or and a supportation of all municip probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, blosensors or bloreactors. Both are useful in tissue typing. The present sequence represents a PRO protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    08-NOV-
  The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in inking a bloomstive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus collypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus stimulate adrenal cortical capillary endothelial growth, and PRO186 stimulate adrenal cortical capillary endothelial growth, and PRO186 stimulate adrenal cortical capillary endothelial growth, and PRO136, PRO136, PRO136, PRO136, Induce c-fos in endothelial growth, and PRO136, useful for treating conditions or disorders where angiogenesis would be beneficial, e.g. wound healing and antagonist of this polypeptide are useful for treating cancerous tumours. PRO812 inhibits vascular calothelial growth in cells and is thus useful for inhibiting endothelial cell growth in mammals which would be beneficial in inhibiting tumour growth. PRO826, PRO136 pro136 and PRO1375 stimulate proliferation of endothelial cells and shiph would be PRO136 stimulate proliferation of endothelial cells and shiph would be proliferation of endothelial cells and shiph would be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       stimulated T-1ymphocytes and are therapeutically useful for enhancing immune response. PROB28, PROB26, PRO1068 or PRO1132 enhance survival of retinal neurons cells (PRO1132 is also enhances survival/Prol1feration of rod photoreceptor cells) and therefore are useful for treating retinal disorders of injuries; e.g. retinitis pigmentosum, AMD. PRO819, PRO813 and PRO11066 induce prol1feration of mammallan kidney mesangial cells, and therefore are useful for treating kidney disorders associated with decreased mesangial cell function such as Berger disease or other nephropathies associated with dermatitis, herpetiformis or Crohn's disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the prol1feration and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
